1 Population accounting
Matched-seed observations
Q and traffic burden B
Which vehicles are represented?
Planned, inserted, completed
Entry waiting, unfinished
Total B and B per planned vehicle
Completed-trip delay is auxiliary
2 Qualified diagnosis
Matched seeds
Paired response intervals
Demand comparability
Volume + construction metadata
Local service
Crossings + queue extent
Warning audit
Both comparison arms
Operating state
Evidence qualifications
Interpretation eligibility
3 Intervention assessment
Retain the adverse condition
Change a different control lever
(e.g., green reallocation)
Matched-seed comparison
Target and donor groups
Corridor-wide traffic burden
Is joint recovery supported?
Supported recovery
Recovery not established
